First, break IT (New edition)

How to reinvent business with speed and agility

The nature of business has completely changed. The always-on, always-connected digital consumer has fractured traditional business models. Company leadership must increase business agility by adapting to the new mindset of democratized innovation or be left behind. CIOs won't be successful in driving digital transformation without an IT operating model designed to effectively enable the organization. This is enterprise Darwinism, where the big no longer eat the small, but where the fast eat the slow.
