

Next-Gen iPaaS for Dummies

Integrate Any Data and App from Any Environment for Any Use Case

To integrate data and applications in the cloud, your hybrid, multi-cloud business has to be able to support any application, data, data management pattern, or user profile, at any speed and scale. A next generation integration platform as a service is flexible and scalable enough to handle any environment or use case, no matter how complex. Find out why you need one and how to choose it in “Next-Gen iPaaS For Dummies, Informatica Special Edition.” You will learn about:

- Designing integrations for modern workloads
- Automating data, application, and API management intelligently
- Supporting all data management patterns like data quality, master data management, and much more
- Supporting all user profiles, developers, citizen integrators, and business analysts
- 10 essential iPaaS capabilities to look for
