The 3 riskiest cloud applications of 2021

And what you can do to protect your business

With all the changes of the past year, businesses are working in entirely new ways – and cloud-based apps are making it possible. But, new benefits come with new risks.

Cisco recently conducted a study of top trends in cloud applications. Discover the apps on the rise, the risks they pose, and strategies for keeping your data, users, and business safe.

The traffic for cloud-based apps grew by **33%** in 2020

1 Remote desktop software

As remote workers look for technical support for their devices, they increasingly turn to remote software, often unapproved by IT.

Unfortunately, this software has proven to be the most exploited vector for ransomware and other attacks.

Beyond increasing awareness of the threats of remote software, Cisco Umbrella application discovery and blocking controls can help organizations discover and block rogue remote desktop protocol queries.

Are you using vulnerable cloud apps that open the door to ransomware, malware, or other types of network attacks? Our Cisco Umbrella infographic reveals the three riskiest ones in 2021.
