

7 Ways to Take Cybersecurity to New Levels

The average company uses more than 70 tools. Firewalls. Web proxies. SIEM. Appliances. CASB. Third-party intelligence. The list goes on - and sometimes you still find your stack coming up short when it comes to securing users anywhere they access the internet. Strengthening your security stack doesn't mean a massive overhaul or a loss of customization and control. Check out these 7 ways to amplify and extend your stack with cloud security from Cisco Umbrella.
