

# Three Reasons to Shift to Integrated Threat Protection

Replacing your security tool stack may seem as daunting as the multiplying cyberthreats your business faces every day. But while cybercrime is growing in complexity, deploying an integrated approach to security can make defending against threats simpler. Give your organisation increased protection by integrating extended detection and response and a cloud-native security information and event management system.

Read **Three Reasons to Shift to Integrated Threat Protection** to discover how to make your security operations centre more efficient, proactive and cost-effective. In this eBook, you'll learn how to:

- Consolidate individual security tools for increased protection and visibility.
- Enable your security centre employees to discover critical threats faster.
- Use AI and automation to become more proactive against attacks.
- Empower your employees to create and innovate confidently.
