10 IAM Capabilities for Governments to Support Citizen Access

How to Give Citizens Secure, Seamless Access to Government Services From Anywhere

The demand for online government services has skyrocketed, leaving IT teams scrambling to deliver secure web and mobile access to services for millions. This massive undertaking is even more complicated by the pressure of ensuring compliance with regulations such as GDPR, and various levels of security protocols that differ from one country to another.

Luckily, supporting online citizen access at scale doesn't have to mean upending operations or compromising security and user experience. Read 10 IAM Capabilities Key for Governments to Support Citizen Access to learn:

- 10 modern IAM capabilities required to support remote citizen access at today's massive scale.
- How you can easily incorporate modern IAM capabilities into your existing IAM environment.
