

Ctrl+Shift+Green: The role of IT leaders in navigating net zero

The carbon footprint of enterprise technology amounts to around 1% of total global greenhouse gas (GHG) emissions. IT leaders are urgently seeking solutions that can support corporate net-zero targets. Ctrl + Shift + Green: The role of IT leaders in navigating net zero is a report that defines the IT function's remit, presenting a range of strategies they are implementing to contribute to their firm's net-zero targets and the challenges they face in doing so. Download the report to find out more about the evolving role of the IT function in the context of their companies' green initiatives.
