

Etisalat underpins its digital transformation with SAHAB, a state-of-the-art telco cloud

See how the company is evolving into a digital service provider.

Etisalat is a service provider that wants to take advantage of the pace of innovation set by the market in general, and open-source communities in particular. In parallel with its telco cloud technology transformation, Etisalat is introducing a DevOps way of working to ensure that employees have appropriate skills and that the company adopts a digital organizational culture.

This paper from Analysis Mason describes Etisalat’s journey to build a telco cloud—a carrier-grade cloud infrastructure—that will support any virtualized network functions (VNFs) and any digital service that the operator cares to launch in the future. It contains information about:

- Etisalat’s digital transformation vision.
- Etisalat’s journey to the telco cloud.
- Next steps, including preparation for 5G and edge computing.
- Benefits and best practices for the telco cloud.

Learn how open source is critical to Etisalat’s ambitions to become a leading provider of digital services. Download the analyst paper.
