How RWTH Aachen University went big on data protection and recovery

A cross-university data backup success story (video)

When one of Europe's largest technical universities does something this big to protect data, it's not just trailblazing: it's a true paradigm shift.

RWTH Aachen University took the extraordinary step of using Hitachi Vantara to create a self-service, on-demand data backup and restoration system across its entire university system—with the goal of eliminating the threat of data loss and network breaches.

Discover how they did it in this short video case study.

Now, this German University of Excellence can rely on:

- 24/7 data availability across all campuses
- Easy onboarding for new partner universities, in just days
- Guaranteed network availability and data visibility
- Swift data restoration whenever necessary
