Choose a platform to support your business initiatives now and in the future

Organizations that use CentOS Linux® 7 currently face a choice. The CentOS Project will discontinue all updates and releases of CentOS Linux 7 after June 30, 2024. As a result, CentOS Linux users must migrate to a new operating system to continue receiving updates and patches. While migrating to a new operating system may seem tedious, it also presents an opportunity to reassess your organization's needs and choose a platform that will better support your business and IT strategies now and in the future.

Red Hat and AWS are helping to ease this transition with a tailored, cost-effective offering for CentOS Linux 7 users.

Ease your migration with a low-cost, high-value offering

Red Hat® Enterprise Linux for Third Party Linux Migration with Extended Life Cycle Support (ELS) via AWS is a low-cost subscription offering for current CentOS Linux 7 users. This offering includes:

- **Red Hat Enterprise Linux Server:** Organizations of all sizes across industries can benefit from this consistent, intelligent operating foundation for modern IT and enterprise hybrid cloud deployments.
- **Convert2RHEL tool:** Convert your CentOS Linux 7 systems to Red Hat Enterprise Linux 7 systems in place with this fully supported tool. Using Convert2RHEL keeps your existing customizations, configurations, and preferences and results in a supported instance of Red Hat Enterprise Linux 7.
- **4 years of Extended Life Cycle Support:** Keep your environment protected and running smoothly with access to security patches and updates until June 2028—an additional 4 years of security and maintenance coverage.
- **High availability (HA):** Deploy managed, highly available clusters of AWS resources running Red Hat Enterprise Linux to deliver reliability, scalability, and availability to your critical production services.

Red Hat Enterprise Linux for Third Party Linux Migration with ELS is available to both existing and new Red Hat customers and can be purchased from the AWS Marketplace in all regions. This subscription is offered at a significantly reduced price compared to standard Red Hat Enterprise Linux offerings, but is not eligible for add-ons like Extended Update Support (EUS). Similar offerings are also available for on-premise deployments.
