

Performance engineering at enterprise scale

Enterprises find themselves challenged to keep pace with faster release schedules yet still realize quality control. How can you go from one to two performance tests per day to 100-200?

Having a handful of experts handle all performance testing doesn't work anymore. Since performance experts don't scale, organizations can instead develop a performance testing approach that does scale.

Our white paper discusses seven key aspects of a standardized performance engineering approach that fits within the reality of today's enterprises — a mix of both centralized and autonomous teams, both packaged enterprise apps and microservices-based apps, traditional dev and DevOps.
