Preparing for New Incident Reporting Requirements

Practical Steps for CISOs to Make Cybersecurity Reporting Frictionless

Government-imposed rules on incident reporting by organizations impacted by cyberattacks are not new – many sectors have been subjected to them for decades. What is new is that governments are introducing new, more stringent incident reporting rules that will affect a broader set of organizations.

The new reporting requirements indicate that the regulators are setting the expectation that CISOs, C-suites and boards of directors take a proactive role in implementing more structured cybersecurity policies and procedures to identify, manage and report on their cyber risks.

Palo Alto Networks Unit 42 partnered with HardenStance to provide a global view and insight into proposed rules with practical guidance on how to "Prepare for New Incident Reporting Requirements."

Download the white paper to understand how to:

- Make mandatory incident reporting as frictionless as possible.
- Apply core principles and practical steps to get your organization ready.
- Derive maximum benefit from the process.
