

Adobe

Safeguard documents at every touchpoint.

In today's hybrid workplace, keeping digital documents secure is more important than ever. Adobe estimates there are currently over 3 trillion PDFs in the world, and the sheer amount of files—combined with disparate access methods across business and personal devices, networks, clouds, apps, and services—makes safeguarding business-critical documents difficult. Managing multiple tools can also create an IT burden, costing your team both time and money.

This eBook will explore how organizations can use Document Cloud—which includes Adobe Acrobat, Acrobat Sign, and Acrobat Services—for enterprise to mitigate security risks across document lifecycles, meet compliance requirements, and provide accessibility for all users.
