COHESITY

The State of Data Security and Management 2023

From a global survey of 3,400 IT and Security decision-makers, this report indicates that 71% said it would take more than four days to recover data and business processes if a cyberattack occurred. It also identifies specific cyber resilience challenges and data security deficiencies, and offers two primary strategies for overcoming them.

Get the report to learn from your peers how to thwart attacks and build resilience against them.
