

## The PEAK Threat Hunting Framework

### The **PEAK** Threat Hunting Framework

Modernized hunting for the evolving  
threat landscape.

Organizations rely on threat hunting to identify malicious activity, improve security and mitigate risk. The PEAK Threat Hunting Framework — a practical, vendor-agnostic, customizable approach to threat hunting, designed to help organizations create or refine their threat hunting programs — takes the experience of top threat hunters and translates their insights to help you gain the most value from threat hunting across your entire security operations.

Download your complimentary copy of “The PEAK Threat Hunting Framework” to discover more about the framework, including:

- New hunt types and processes
- Defined deliverables
- Actionable metrics
- Prioritized detection types
- A built-in maturity model
