

# Best Practices in Cybersecurity and Cyber Resilience

In today's digital world, consumers and employees expect organizations of all types and sizes to operate without interruption. In fact, contractual obligations and service level agreements demand it.

But a rise in incidents leads to a rise in potential downtime. To keep your business running before, during, and even after an attack, you need more than cybersecurity. You need cyber resilience.

Read this white paper to discover six best practices to reduce risk, strengthen compliance, and achieve cyber resilience—and get a checklist of key capabilities your organization needs to fight ransomware.
