COHESITY

Case study: USDA Simplifies Data Management, Saving Staff 30 Hours a Week

IT modernization is driving efficiencies in government. Within the U.S. Department of Agriculture, five agencies—including the Digital Infrastructure Services Center and Animal & Plant Health Inspection Services—are simplifying data management with Cohesity. Strong Cohesity platform advantages, partnership with WWT, and in some cases integration with Cisco Unified Computing System (UCS), are empowering the USDA to improve backups and address other data management challenges such as target storage and object services for even greater gains.
