

## Deploy industry-leading solutions for end-to-end Zero Trust architecture

Zero Trust is more than the sum of user identity, segmentation, and secure access. It's a security strategy upon which to build a complete security ecosystem. Zero Trust is founded on the principle of least-privileged access and the idea that no user, device, workload, or app is inherently trustworthy. It is distinct from a "castle and moat" architecture, which trusts anything inside by default.

The image shows the cover of an eBook. At the top left is the AWS logo. The main title is "Achieve an integrated end-to-end Zero Trust architecture with recognized leaders" in white text on a dark blue background. Below the title, it says "In collaboration with" followed by logos for CROWDSTRIKE, okta, and zscaler. At the bottom left, there is a small copyright notice: "© 2021 Amazon Web Services, Inc. or its affiliates. All rights reserved." The background of the cover features a grid of binary code (0s and 1s) that fades out towards the bottom.
